Problem to be solved

While building a resume with traditional tools, users may:

1. Take the predicament of how and what to write.
 2. Take a lot of time to organize and modify fully.
 3. Build an unorganized resume file or inappropriate format.
 4. Lack of standard templates
 5. Lack of efficiency
 6. Need of external help
- 

Reason for choosing the challenge

The resume is the very first thing that a potential employer encounters regarding an applicant and is used to screen applicants, often followed by an interview.

Creating a resume is a bit tedious task for any working professional. One has to keep it short, simple, and with the latest work experience, and constantly update it over a while.

We are making this project to help those who want
to build their own resume with some
perfectionism and help our colleagues create
their resumes via this app

Resume Builder

Obtained solution =

Our application will be a desktop application that contains the following features:

- user can easily choose the desired template layout design he wants
- It provides a description box that informs the user what to write in each section.
- there are a variety of examples divided into categories
- user can connect with an expert to help him make a professional resume
